- The mechanism that halves the number of

chromosomes in cells is a form of cell

division called meiosis - Meiosis consists of

two successive nuclear divisions. - Before

the first division, the DNA is copied, just as it

is before mitosis., Section Review 11-1 1.

INTRODUCTION TO GENETICS Genetics is

the study of heredity, that is, how such as

eye colour are inherited from to offspring.

Genes are the chemicals in the nuclei of cells

that determine the characteristics that are inherited. Each human has thousands of genes in the nucleus. Genes are made of (deoxyribonucleic acid)., Mr. Reese Science. Search this site. Home. the chapter guide that I pass out on the first day of Chapter 11 - Introduction to Genetics.

- The study guide goes along with Miller and Levine and lists the corresponding state standards from Massachusetts (easy to adapt for any state). - Lists important vocabulary terms. - Chapter, Genetics identifies which features are inherited, and explains how these features pass from generation to generation. In addition to inheritance, genetics studies how genes are turned on and off to control what substances are made in a cell ...
