Mattingly, William IL Heiser and David T. Pratt, AIAA Education Series. ISBN | -56347 -538 -3 - 2002, This second edition of Cumpsty's self-contained introduction to the aerodynamic and thermodynamic design of modern civil and military jet engines features two engine design projects. The first

is for a new large passenger aircraft, and the second for a new fighter aircraft., For our aircraft design, we made certain assumptions for the efficiencies which are shown in the table below. Using Aircraft Engine Design by John D. Mattingly as a reference, we chose an advanced level of technology (level 4) to assume efficiencies which represents typical values for, EMBED (for wordpress.com hosted blogs and archive.org item <description> tags), g GE Aircraft Engines The Aircraft Engine Design Project Combustor HPT The Aircraft Engine Design Project Fundamentals of Engine Cycles Compressor Exhaust TbjtE i airflow 4 Inlet Turbojet Engine. g GE Aircraft Engines Engine Modules and Components Turbojet Stations Compressor Engine Modules and Components Combustor HPT, aircraft engine in the 18,500 to 35,000 lb ofthrust class1.
