ALGEBRAIC METHODS FOR NONLINEAR CONTROL SYSTEMS COMMUNICATIONS AND CONTROL ENGINEERING PDF -

Search results, Nonlinear algebraic equations, which are also called polynomial equations, are defined by equating polynomials to zero. For example, $x^2 + 1 = 0$.

For a single polynomial equation, root-finding algorithms can be used to find solutions to the equation (i.e., sets of values for the variables that satisfy the equation).

In mathematics, nonlinear programming is the process of solving an optimization problem where some of the constraints of the objective function are nonlinear.

An optimization problem is one of calculation of the extrema (maxima, minima or stationary points) of an objective function over a set of unknown real variables and conditional to the

..., SIAM Presents \hat{c} ! Features Lectures from our Archives Since 2008 SIAM has been capturing many Invited Lectures, Prize Lectures, and selected Minisymposia from our conference.
