This treatment approach is not well known because it is considered alternative or experimental - or even dangerous[i] - by the medical and scientific community and hence ..., In Part 1 of this series, I talked about why the basic premise of the acid-alkaline theory is flawed, and I showed that the evidence doesn't support the idea that a net acid-forming diet is harmful to bone health. Now I want to look at the effect of dietary acid load on other health conditions. Can the acidity or alkalinity of your diet affect your risk for muscle loss, cancer, and more?, Many of you have probably heard of the "alkaline diet". There are a few different versions of the acid-alkaline theory circulating the internet, but the basic claim is that the foods we eat leave behind an "ash" after they are

metabolized, and this ash can be acid or alkaline (alkaline meaning more basic on the pH scale). According to the theory, it is in our best interest to make sure ..., The decades-old dogma that the acid-forming quality of animal protein leads to bone loss has been called into question., 5 pH that is between 10 and 1000 times more alkaline than the starting water, depending on the minerals in the original water and on the pH setting you choose., MgSO4 (CTA) 2007 - Page 1(5) MAGNESIUM SULFATE Chemical and Technical Assessment Revised by Madduri V.
