Combustion Analysis Basics 1 Introduction

Combustion Combustion occurs when fossil
fuels, such as natural gas, fuel oil, coal or

gasoline, react with oxygen, Combustion, or
burning, is a high-temperature exothermic

redox chemical reaction between a fuel (the
reductant) and an oxidant, usually

atmospheric oxygen, that produces oxidized,
often gaseous products, in a mixture termed

as smoke.Combustion in a fire produces a
flame, and the heat produced can make

combustion self-sustaining. Combustion is
often a complicated sequence of elementary

radical ..., Introduction to Pneumatics and

In an internal combustion engine, the expansion of the high-temperature and high-pressure gases produced by combustion applies direct force to some component of the engine., Introduction to Electric Vehicles Ed Ristad Alternative Fuel Vehicle Instructor Santa Rosa Junior College altfuels@sonic.net Solar Living Institute EV101, An Introduction for the Southeast WWW.
