datasets that are high-dimensional,
incomplete and noisy is generally
challenging. TDA provides a general
framework to analyze such data in a manner
that is insensitive to the particular metric

Social network analysis (SNA) is the process
of investigating social structures through the
use of networks and graph theory. It
characterizes networked structures in terms

of nodes (individual actors, people, or things
within the network) and the ties, edges, or
links (relationships or interactions) that
connect them. Examples of social structures
commonly visualized through social network

Title: The Algorithmics of Write Optimization Abstract: Write-optimized dictionaries (WODs), such as LSM trees and B^{epsilon} trees, are increasingly used in databases and file systems. Such data structures support very fast insertions without sacrificing lookup performance.
