Butterworth-Heinemann is an imprint of

Elsevier, Social network analysis (SNA) is

the process of investigating social structures

through the use of networks and graph

theory. It characterizes networked structures

in terms of nodes (individual actors, people,

or things within the network) and the ties,

edges, or links (relationships or interactions)

that connect them. Examples of social

structures commonly visualized through

social network ..., A transport model with

behavioral and technological features of 17

world regions is developed. â€¢ World

transport demand, energy and emissions

towards 2100 are projected., A value network

is a business analysis perspective that

describes social and technical resources

within and between businesses. The nodes

in a value network represent people (or

roles). The nodes are connected by

interactions that represent tangible and

intangible deliverables. These deliverables

take the form of knowledge or other

intangibles and/or financial value., 2 NOTE

is the most popular accident causation model
and is widely used throughout various
industries. A debate exists in the research
literature over whether the SCM remains a
viable tool for accident analysis.,
