TUTORIAL No.6 DIMENSIONAL ANALYSIS

When you have completed this tutorial you

should be able to do the following., In fluid

dynamics, a stall is a reduction in the lift

coefficient generated by a foil as angle of

attack increases. This occurs when the

critical angle of attack of the foil is exceeded.

The critical angle of attack is typically about

15 degrees, but it may vary significantly

depending on the fluid, foil, and Reynolds

number.. Stalls in fixed-wing flight are often

experienced as a sudden ..., In physics, a

fluid is a substance that continually deforms

(flows) under an applied shear stress.Fluids

are a subset of the phases of matter and

include liquids, gases, plasmas, and to some

extent, plastic solids.Fluids are substances

that have zero shear modulus, or, in simpler

terms, a fluid is a substance which cannot

resist any shear force applied to it., You may

Overview of numerical methods â€œ Many  
CFD techniques exist. â€œ The most  
common in commercially available CFD  
programs are: â€œ The finite volume method  
has the broadest applicability (~80%).. Stress  
is the force per unit area on a body that  
tends to cause it to change shape.. Stress is  
a measure of the internal forces in a body  
between its particles. These internal forces  
are a reaction to the external forces applied  
on the body that cause it to separate,  
compress or slide. External forces are either  
surface forces or body forces. Stress is the  
average force per unit area that a ..., The
