Continuous random variables have a probability density function (pdf) such that for $a < b$ $P(a \leq Y \leq b) = \int_a^b f(y) dy$ A model for a single sample, 1.2 Simple linear regression model

$\hat{\epsilon}$ The simple linear regression function is $Y_i = \beta_0 + \beta_1 X_i + \epsilon_i$ (1.1) In this model β_0 , β_1 , and ϵ_i are parameters and Y_i and X_i are measured values. This is called a "first order model" because it is linear in both the parameters and the independent variable., Applied Linear Regression Models by John Neter, William Wasserman, Michael H.
