### AUTOMATIC SPEAKER RECOGNITION

#### SYSTEM PDF - Search results, Speaker

recognition is the identification of a person from characteristics of voices (voice biometrics). It is also called voice recognition.

There is a difference between speaker recognition (recognizing who is speaking) and speech recognition (recognizing what is being said). These two terms are frequently confused, and "voice recognition" can be used for both.

Click here to download .: With identity fraud in our society reaching unprecedented proportions and with an increasing emphasis on the emerging automatic personal identification applications, biometrics-based verification, especially fingerprint-based identification, is receiving a lot of attention.

Pattern recognition is a branch of machine learning that focuses on the

recognition of patterns and regularities in data, although it is in some cases considered to be nearly synonymous with machine learning. Pattern recognition systems are in many cases trained from labeled "training" data (supervised learning), but when no labeled data are available other algorithms can be used to discover ...
