physics, string theory is a theoretical framework in which the point-like particles of particle physics are replaced by one-dimensional objects called strings. It describes how these strings propagate through space and interact with each other.

On distance scales larger than the string scale, a string looks just like an ordinary particle, with its mass, charge, and other properties ... In algebraic geometry and theoretical physics, mirror symmetry is a relationship between geometric objects called Calabi-Yau manifolds. The term

refers to a situation where two Calabi-Yau manifolds look very different geometrically but are nevertheless equivalent when employed as extra dimensions of string theory.. Mirror symmetry was originally discovered by physicists., Email:
