to use the structure of proteins as a basis for  
designing new ligands by applying the  
principles of molecular recognition. Selective  
high affinity binding to the target is generally  
desirable since it leads to more efficacious  
drugs with fewer side effects. Thus, one of  
the most important principles for designing or  
obtaining potential new ligands is to ..., Learn

Two north poles always repel each other, as do two south poles. However, north and south poles always attract each other., Download Amcat syllabus & prepare yourself for Amcat test to get latest job opportunities in various sectors across India., Ellipsometry is an optical technique for investigating the dielectric properties (complex refractive index or dielectric function) of thin films. Ellipsometry measures the change of polarization upon reflection or

transmission and compares it to a model. It can be used to characterize composition, roughness, thickness (depth), crystalline nature, doping concentration, electrical conductivity ..., The document Chemical Process Simulation and the Aspen HYSYS v8.3 Software is a self-paced instructional manual that aids students in learning how to use a chemical process simulator and how a process simulator models material balances, phase equilibria, and energy balances for chemical process units., Basic Biostatistics is a concise, introductory text that covers biostatistical principles and focuses on the common types of data encountered in public health and biomedical fields., Nanomedicine, Vol. I: Basic Capabilities (Landes Bioscience, 1999). The first volume of the Nanomedicine book series describes the set of basic capabilities of molecular machine systems that may be required by many, if not most, medical nanorobotic devices, including the physical, chemical, thermodynamic, mechanical, and biological limits of such devices., 1 Introduction Features Materials Two ferrule compact design Tubefit Engineers are designed as leak free
