hotly debated globally since it is increasingly understood that first generation biofuels, primarily produced from food crops and mostly oil seeds are limited in their ability to achieve targets for biofuel production,

climate change mitigation and economic

growth., A biofuel is a fuel that is produced through contemporary biological processes, such as agriculture and anaerobic digestion, rather than a fuel produced by geological processes such as those involved in the formation of fossil fuels, such as coal and petroleum, from prehistoric biological matter..

Biofuels can be derived directly from plants (i.e. energy crops), or indirectly from agricultural ..., Biodiesel is gaining more and more importance as an attractive fuel due to the depleting fossil fuel resources.
