Molecular biology / m is a branch of
biology that concerns the molecular basis of
biological activity between biomolecules in
the various systems of a cell, including the
interactions between DNA, RNA, proteins

and their biosynthesis, as well as the
regulation of these interactions. Writing in
Nature in 1961, William Astbury described
molecular biology as:, The history of
molecular biology begins in the 1930s with
the convergence of various, previously
distinct biological and physical disciplines:
biochemistry, genetics, microbiology, virology
and physics. With the hope of understanding
life at its most fundamental level, numerous
physicists and chemists also took an interest
in what would become molecular biology.,

INTRODUCTION - OVERVIEW - Biology as a science deals with the origin, history, process, and physical characteristics, of plants and animals: it includes botany, and zoology. A study of biology includes the study of the chemical basis of living organisms, DNA. Other related sciences include microbiology and organic chemistry.,

Appropriate for: high school biology (all levels), introductory college biology. This lesson serves as an extension to the Howard Hughes Medical Institute short film The Making of the Fittest: Natural Selection and Adaptation. It provides an opportunity for students to analyze amino acid data and draw conclusions about the evolution of coat-color phenotypes in the rock pocket mouse.,

Authors of accepted papers will receive proofs of their article 3-5 weeks after

the decision is sent. Timely attention to proofs will ensure the article is slated for the next possible weekly issue., The eukaryotic cell cycle comprises a sequence of events that culminate in cell division. Proteins at different checkpoints throughout the cell cycle regulate progression from one phase to the next” a process that usually works without errors. When errors do occur, they can have catastrophic ..., iii module S during the period 2002”10, FA o undertook an intense activity of biosafety capacity development, largely centred on enhancing the capacities of
