

Emerging role of *Raoultella ornithinolytica* in human infections: a series of cases and review of the literature, *Journal of Clinical Microbiology* 2016 [1].

*Raoultella ornithinolytica* is a Gram-negative, facultative anaerobic, non-motile, rod-shaped bacterium. It is a member of the family Enterobacteriaceae, commensal of the human digestive tract and of animals. It can be found in soil, water and natural materials. It is grouped with the enterobacteria and is an opportunistic pathogen. ...

Resistance trends among clinical isolates in China reported from CHINET surveillance of bacterial resistance, 2005–2014, *Antonie van Leeuwenhoek* 2015.

ABSTRACT. A new procedure for rapid detection of *Salmonella* in foods, based on the combination of SPRINT™, MSR-V™ and *Salmonella* Latex Test™, was

evaluated. SPRINT™ is a system to reduce the preenrichment and selective enrichment steps to 24 hours., pour télécharger et voir les films en streaming gratuitement sur notre site enregistrer vous gratuitement .
