3. Root-finding > 3.1 The bisection method

In this chapter we assume that $f: \mathbb{R} \rightarrow \mathbb{R}$ i.e.,

$f(x)$ is a function that is real valued and that

x is a real variable., Newton-Raphson Method

for Solving Nonlinear Equations. Copyrights:

University of South Florida, 4202 E Fowler

Ave, Tampa, FL 33620-5350., In computer

science, binary search, also known as

half-interval search, logarithmic search, or

binary chop, is a search algorithm that finds

the position of a target value within a sorted

array. Binary search compares the target

value to the middle element of the array. If

they are not equal, the half in which the

target cannot lie is eliminated and the search

continues on the remaining half ..., In

computer science, divide and conquer is an

algorithm design paradigm based on

multi-branched recursion.A divide and

conquer algorithm works by recursively

breaking down a problem into two or more

sub-problems of the same or related type,

until these become simple enough to be

solved directly. The solutions to the

sub-problems are then combined to give a

solution to the original problem., JuliaCon

2017: Berkeley, CA. Over the last few years

we have seen Deep Learning rise to

prominence not just in academia with

state-of-the-art results for well-established

tasks, but also in industry to leverage an

ever-increasing amount of data becoming

available., OrangeFS is an open-source,

multi-server scalable parallel file system

targeted at production parallel computation

environments. It is designed specifically to

scale to very large numbers of clients and

servers.
