high-temperature exothermic redox chemical  
reaction between a fuel (the reductant) and  
an oxidant, usually atmospheric oxygen, that  
produces oxidized, often gaseous products,  
in a mixture termed as smoke. Combustion in  
a fire produces a flame, and the heat  
produced can make combustion  
self-sustaining. Combustion is often a  
complicated sequence of elementary radical

An internal combustion engine (ICE) is a  
heat engine where the combustion of a fuel  
occurs with an oxidizer (usually air) in a  
combustion chamber that is an integral part  
of the working fluid flow circuit. In an internal  
combustion engine, the expansion of the  
high-temperature and high-pressure gases  
produced by combustion applies direct force  
to some component of the engine., 4
