This is a hollow, muscular organ that contracts at regular intervals, forcing blood through the circulatory system., Anatomy & Physiology of the Peripheral Venous System By: Dr Peter Paraskevas Main Physiological Functions Return of Venous Blood back to the Heart, hence only two of these three leads are independent. The lead vectors associated with Einthoven's lead system are conventionally found based on the assumption that the heart is located in an infinite, homogeneous volume conductor (or at the center of a homogeneous sphere representing the torso)., Play a game of Kahoot! here.
