medical terminology endocrine system.pdf

FREE PDF DOWNLOAD, This system has a

number of functions: - Control of heart rate -

Control of blood pressure - Control of immune response -

Control of reproduction - Control of emotional

state - Control of the overall growth and

development of the body. The Endocrine

System The endocrine system consists of

many glands and tissues., Section 13.2 -

Endocrine Glands Both the nervous system

and the endocrine system are control

systems which are used to help maintain

homeostasis in the body. The nervous

system uses bioelectrical signals that travel

along nerve cells while the endocrine system

releases hormones into the bloodstream and

these circulate throughout the body.,

CHAPTER 13: ENDOCRINE SYSTEM I.

INTRODUCTION The general function of the

endocrine system is to integrate body

systems, in conjunction with the nervous

system. Recall that glands are effectors or

responsive body parts that are stimulated by

motor impulses from the autonomic nervous

system. Some of these glands, endocrine

glands compose the endocrine system., The

Endocrine System Chapter Learning

Objectives After completing this chapter, you

will be able to: • Define and spell the word

parts used to create terms for the endocrine

system. • Identify the major organs of the

endocrine system and describe their

structure and function. • Break down and

define common medical terms used for

symptoms, diseases, disorders, procedures,

treatments, and devices associated with the

endocrine system., CHAPTER 13: THE

Endocrine System

Produces Hormones

• Endocrine system: collection of specialized cells, and tissues that secrete hormones

Endocrine glands: ductless organs that secrete hormones into blood, interstitial fluid, lymph

• Hormones

• “Chemical messengers secreted by endocrine glands, Start studying Medical Terminology Chapter 13: The Endocrine System Learning Exercise. Learn vocabulary, terms, and more with flashcards, games, and other study tools. Learn vocabulary, terms, and more with flashcards, games, and other study tools., Chapter 11 The Endocrine System . 2 What you absolutely need to know

• Distinguish between endocrine and exocrine glands

• Identify and locate the primary endocrine glands and list the major hormones produced by each gland

• Describe the mechanisms of steroid and non-steroid hormone action . 3 Objectives

• Explain how negative and positive feedback mechanisms regulate secretion of ..., 13. Discuss the actions of and controls over each of the posterior pituitary gland hormones. THYROID GLAND

14. Describe the location and histology of the

thyroid gland. 15. Explain the actions of thyroid hormones. 16. Describe the formation, storage, and release of thyroid hormones. PARATHYROID GLANDS 17. Describe the location and histology of the parathyroid glands.,

• State the vital function of the endocrine system.

• Identify and state the functions of the various hormones secreted by the endocrine glands.

• Analyze, build, spell, and pronounce medical words.

• Comprehend the drugs highlighted in this chapter.

• Describe diagnostic and laboratory tests related to the endocrine system., both a hormone and neurohormone; stimulates the sympathetic nervous system, raises blood pressure, strengthens the heartbeat and stimulates muscle contractions oxytocin stimulates uterine contractions during childbirth, causes milk to flow from the mammary glands, The endocrine system is controlled largely by the hypothalamus. Remember from Chapter 12 that the hypothalamus is located near the middle of the brain, and is connected to the pituitary gland. The hypothalamus monitors information entering the brain, and controls the autonomic nervous system., Title:
