of Fluids In this chapter we discuss a number

of fundamental properties of fluids. An

understanding of these properties is

essential for us to apply basic principles of

is a gas in an atmosphere that absorbs and

emits radiant energy within the thermal

infrared range. This process is the

fundamental cause of the greenhouse effect.

The primary greenhouse gases in Earth's

atmosphere are water vapor, carbon dioxide,

methane, nitrous oxide, and ozone. Without

greenhouse gases, the average temperature

of Earth's surface would be about $\hat{\sim}18 \hat{\text{A}}^{\circ}\text{C}$
