CARBONYL-ADDITION REACTIONS Notice  
in this synthesis that all steps following acetal  
formation involve basic or neutral condi-, The  
DNA double helix is stabilized primarily by  
two forces: hydrogen bonds between  
nucleotides and base-stacking interactions  
among aromatic nucleobases. In the  
aqueous environment of the cell, the  
conjugated  $\pi$  bonds of nucleotide bases  
align perpendicular to the axis of the DNA  
molecule, minimizing their interaction with  
the solvation shell., The repeating, or

monomer, units that are linked together to  
form nucleic acids are known as nucleotides  
A monomer unit that is linked together to  
form nucleic acids..The deoxyribonucleic  
acid (DNA) of a typical mammalian cell  
contains about  $3 \times 10^9$  nucleotides.,

USE AS PROTECTING GROUPS 923 The  
formation of hemiacetals is catalyzed not  
only by acids but by bases as well (Problem  
19.16b, p. 910). However, the conversion of  
hemiacetals into acetals is catalyzed only by  
acids, In chemistry, diprotic acid is a class of  
Arrhenius acids which are capable of  
donating two protons or hydrogen cations per  
molecule when dissociating in aqueous
