results, In probability theory and statistics, the exponential distribution (also known as negative exponential distribution) is the probability distribution that describes the time between events in a Poisson point process, i.e., a process in which events occur continuously and independently at a constant average rate. It is a particular case of the gamma distribution.

1 Right Triangle Trigonometry Trigonometry is the study of the relations between the sides and angles of triangles. The word "trigonometry" is derived from the Greek words trigono (τρίγωνο), meaning "triangle", and metro (μέτρο), meaning "measure". Abernethy 536 Oyster Road, North Palm Beach, FL 33408-4328 561-842-4082, One of the reasons for the importance of the matrix exponential is that it can be used to solve systems of linear ordinary differential equations. The solution of $\dot{x} = Ax$, where A is a constant matrix, is given by $x(t) = e^{At}x(0)$. The matrix exponential can also be used to solve the inhomogeneous equation, $\dot{x} = Ax + b$.
