Chapter 11 presents criteria for the design

and, Types of moment resisting connections.

Moment resisting connections are used in

multi-storey un-braced buildings and in

single-storey portal frame

buildings. Connections in multi-storey frames

are most likely to be bolted, full depth end

plate connections or extended end plate

connections., Most welded connections in

building and bridgework use fillet welds, usually in a Tee configuration. They typically include end plate, stiffener, bearing and bracing connections to rolled sections or plate girders, and the web to flange connections on the plate girders themselves. These are relatively simple to prepare, weld and test in normal configurations, joint fit-up being the principal ...
