Chapter 6 Oxidation-Reduction Reactions

Review Skills 6.1 An Introduction to

Oxidation-Reduction Reactions Oxidation,

Reduction, and the Formation of Binary Ionic

Compounds, A chemical reaction is a

process that leads to the chemical

transformation of one set of chemical

substances to another. Classically, chemical

reactions encompass changes that only

involve the positions of electrons in the

forming and breaking of chemical bonds

between atoms, with no change to the nuclei

(no change to the elements present), and

can often be described by a chemical

equation., Chapter 10 ChemiCal

not done with such questions yet. In Chapter

9, our questions focused on chemical
