gas and liquid region and ends in the critical point, where the liquid and gas phases disappear to become a single supercritical phase., 9 Conveying This chapter covers the transportation of particles by fluids. It considers hydraulic, pneumatic and mechanical conveying means. The former uses liquids the second gases and an example of the latter, Notes on the Thermodynamics of Solids J.W. Meeting Fundamentals & Application of Medium Voltage Adjustable Speed Drives (ASD), Detergents are used in molecular biology laboratories every day. They are present in cell lysis buffers (e.g., in kits for plasmid isolation), in electrophoresis and blotting buffers, and, most importantly, they are used for cleaning laboratory glassware and the hands of the laboratory staff., Chapter 7 Vapour-Liquid Equilibria . 7.1 Introduction .
