(1) Introduction Fe-Mn-Si-based shape memory alloys (Fe-SMAs) are known as a practicable iron-based SMA. With Mn, Si and Fe as basic constituent elements, Cr and Ni are frequently added to develop high corrosive-resistant Fe-SMAs (Table 1)., Request PDF on ResearchGate | Characteristics and Applications of Molds |

The ripening and maturing techniques used to process meat products quickly lead to a distinctive surface colonization by a great number of mycetes., 1.5. Growth of pure semiconductor crystals Semiconductors can be grown as single crystals with high quality (dislocation densities as low as 1000 cm^{-3}) and high purity (impurity

concentrations less than $1:10^{12}$).

Czochralski Method Czochralski method is for growing bulk single crystal (erillis-kide) ingots (tanko). Typical growth speed is a few
