Catalyst Deactivation, The Damköhler

numbers (Da) are dimensionless numbers

used in chemical engineering to relate the

chemical reaction timescale (reaction rate) to

the transport phenomena rate occurring in a

system. It is named after German chemist

Gerhard Damköhler. The Karlovitz number

(Ka) is related to the Damköhler number by

$Da = 1/Ka$. In its most commonly used form,

the Damköhler number relates the ...,

outflowing of water or gas to natural body of

water, or from a manmade structure.

Effluent, in engineering, is the stream exiting

a chemical reactor.. Background. Effluent is

defined by the United States Environmental

Protection Agency as "wastewater - treated
