CHEMISTRY ELECTRON CONFIGURATION TEST ANSWERS PDF - Search results, Fluorine atoms have nine electrons, one fewer than neon, and electron configuration  $1s^2 2s^2 2p^5$ : two electrons in a filled inner shell and seven in an outer shell requiring one more to be filled. The outer electrons are ineffective at nuclear shielding, and experience a high effective nuclear charge of  $9 - 2 = 7$ ; this affects the atom's physical properties. The electron is a subatomic particle, symbol  $e^-$  or  $\hat{e}^-$ , whose electric charge is negative one elementary charge. Electrons belong to the first generation of the lepton particle family, and are generally thought to be elementary particles because they have no known components or substructure. The electron has a mass that is approximately  $1/1836$  that of the proton. CHEMISTRY TUTORIALS . Free online chemistry tutorials Rader's Chemistry 4 Kids by Chem4Kids.com.
