Pharmacokinetics is a fundamental

scientific discipline that underpins applied

therapeutics. Patients need to be prescribed

appropriate medicines, Clinical

Pharmacokinetics 2014/2015 2 Intended

Learning Outcomes: A- Knowledge and

Understanding: Student is expected to A1.

Discuss and understand the basic

pharmacokinetic principles and key

pharmacokinetic parameters.,

'Pharmacokinetics: 1) Process of the uptake

of drugs by the body, the biotransformation

they undergo, the distribution of the drugs

and their metabolites in the tissues, and the

elimination of the drugs and their metabolites

from the body over a period of time., 1 1

General overview: clinical pharmacokinetics,

2 Pharmacokinetics, 4 Drug clearance (CL),

6 Volume of distribution (Vd), 8 The half-life

($t_{1/2}$), 10, Clinical trials involving new drugs

are commonly classified into five phases.

Each phase of the drug approval process is

treated as a separate clinical trial.,

Policy. and . Duke University School of

Medicine. FDA's Clinical Investigator

Course, Objectives. Discuss issues

regarding clinical trial design for the

development of biosimilars in the European

Union and the United States, with special

focus on monoclonal antibodies used in the

treatment of inflammatory diseases.,

Introduction. Monoclonal antibody (mAb)

therapeutics are an important and rapidly

growing class of therapeutic agents with over

470 molecules in the clinical pipeline and

many more in earlier stages of drug

development .Selecting the right mAb is a

key determinant of its clinical success and

depends on early understanding of its PK/PD

and successfully translating it to humans.,

The following are multiple choice questions

in a style similar to those included in the

USMLE step 1. The main topic here is:

pharmacokinetics (drug metabolism).This

quiz has been uploaded to Scribd by medical

student James Lamberg.The correct answers

can be found in link at the end of this post.,
