COLOR CHEMISTRY SYNTHESSES
PROPERTIES AND APPLICATIONS OF
ORGANIC DYES AND PIGMENTS PDF -
Search results, Fullerene chemistry is a field
of organic chemistry devoted to the chemical
properties of fullerenes. Research in this field
is driven by the need to functionalize
fullerenes and tune their properties. For
example, fullerene is notoriously insoluble
and adding a suitable group can enhance
solubility. By adding a polymerizable group, a
fullerene polymer can be obtained.
Functionalized ..., The electrocatalytic water
oxidation performance of a new
cobalt-based catalyst, $\text{Co}_3(\text{BO}_3)_2$, with
a Kotoite-type crystal structure was
investigated at neutral pH. Hybridization of
the catalyst with carbon nanotubes (CNTs)
improved the electrocatalytic properties
significantly., The luminescence of a class of
bismuth heterocycles, termed bismoles, was
studied via ultrafast laser spectroscopy in
conjunction with TD-DFT computations to
determine why phosphorescence is observed
for some bismoles but not others., Kaolinite (/

$\text{Al}_2\text{Si}_2\text{O}_5$) is a clay mineral,
part of the group of industrial minerals, with
the chemical composition $\text{Al}_2\text{Si}_2\text{O}_5$. It is
a layered silicate mineral, with one
tetrahedral sheet of silica (SiO_4) linked
through oxygen atoms to one octahedral
sheet of alumina (AlO_6) octahedra. Rocks
that are rich in kaolinite are known as kaolin /
Kaolin / or china clay., A
