into most IBM PC compatible computers.

The first IBM Personal Computer, model

5150, employed a standard 2.25 inch

magnetic driven (dynamic) speaker. More

recent computers use a piezoelectric

speaker instead. The speaker allows

software and firmware to provide auditory

feedback to a user, such as to report a

hardware fault., A quiet PC is a personal

computer that makes very little, or no

noise.Common uses for quiet PCs include

video editing, sound mixing and home

theater PCs, but noise reduction techniques

can also be used to greatly reduce the noise

from servers.There is currently no standard

definition for a "quiet PC", and the term is

generally not used in a business context, but
