A machine (or mechanical device) uses

power to apply forces and control movement

to perform an intended action. Machines can

be driven by animals and people, by natural

forces such as wind and water, and by

chemical, thermal, or electrical power, and

include a system of mechanisms that shape

the actuator input to achieve a specific

application of output forces and movement.,

An electrical telegraph is a telegraph that

uses electrical signals, usually conveyed via

dedicated telecommunication circuit or radio..

The electrical telegraph, or more commonly

just telegraph, superseded optical

semaphore telegraph systems, thus

becoming the first form of electrical

telecommunications.In a matter of decades

after their creation in the 1830s, electrical
