results, Digital electronics or digital
(electronic) circuits are electronics that
operate on digital signals. In contrast, analog
circuits manipulate analog signals whose
performance is more subject to
manufacturing tolerance, signal attenuation
and noise. Digital techniques are helpful
because it is a lot easier to get an electronic
device to switch into one of a number of
known states than to ..., Processor design is
the design engineering task of creating a
processor, a component of computer
hardware. It is a subfield of computer
engineering (design, development and
implementation) and electronics engineering
(fabrication). The design process involves
choosing an instruction set and a certain
execution paradigm (e.g. VLIW or RISC) and
results in a microarchitecture, which might be
