## 2 SUMMARY

This chapter presents the evolutionary changes that have occurred in parallel, distributed, and cloud computing over the past 30 years, driven by applications, Distributed systems, or distributed computing, have spawned many familiar technologies across the years, including Cloud computing, Grid computing, Utility computing, application service provision (ASP), Software as a Service (SaaS), and Web 2.0., II CLOUD Cloud computing is the convergence and evolution of several concepts from virtualization, distributed application design, grid, and enterprise IT management to enable a more flexible approach for deploying and, Distributed and Cloud Computing K.
