Evolutionarily, bracken may be considered

one of the most successful ferns. Bracken,

like heather, is typically found in moorland

environments, and is commonly referred to

by local populations in the north of England

as 'Moorland Scrub'. 17 2. Floating aquatic

macrophytes " Azolla Floating aquatic

macrophytes are defined as plants that float

on the water surface, usually with submerged

roots., Terrestrial and Palustrine Plant

Communities of Pennsylvania 2nd Edition

builds on Fike (1999) in that the plant

community concept is based on

characteristic vegetation and physiognomy;

hydrology, ecological processes, and

distribution are also presented.. The

following presents the PNHP concept of a

plant community, describes how

communities were named, and identifies data

sources used., 1 The flora of Japan is

marked by a large variety of species. There

are about 4,500 native plant species in

Japan (3,950 angiosperms, 40

gymnosperms, 500 ferns)., Share on

cloud forest, also called a water forest, is a

generally tropical or subtropical, evergreen,

montane, moist forest characterized by a

persistent, frequent or seasonal low-level

cloud cover, usually at the canopy level,

formally described in the International Cloud

Atlas (2017) as silvagenitus. Cloud forests

often exhibit an abundance of mosses

covering the ground and vegetation, in which
