and electrical engineering, a fuse is an

electrical safety device that operates to

provide overcurrent protection of an electrical

circuit. Its essential component is a metal

wire or strip that melts when too much

current flows through it, thereby interrupting

the current. It is a sacrificial device; once a

like all commodity markets, has a history of volatility, moving not only with the standard forces of supply and demand, but also to whims of geopolitics. It has also evolved particularities of its own in response to the unique nature and use of this material. Historically, uranium has been mined in countries willing to export, including Australia and Canada. Nanotechnology is a budding technology that has been identified as a vital scientific and commercial venture with global economic benefits. With the increasing knowledge of nanomaterial manufacturing techniques, research groups around the globe are focusing more on the preparation of nanomaterials for various applications.
