PDF - Search results, A double layer (DL,  
also called an electrical double layer, EDL) is  
a structure that appears on the surface of an  
object when it is exposed to a fluid. The  
object might be a solid particle, a gas bubble,  
a liquid droplet, or a porous body. The DL  
refers to two parallel layers of charge  
surrounding the object. The first layer, the  
surface charge (either positive or negative),  
consists of ions ..., The Bend+Libration

characterized by the experience of seeing  
light without light actually entering the  
eye. The word phosphene comes from the  
Greek words phos (light) and phainein (to  
show). Phosphenes that are induced by  
movement or sound may be associated with  
optic neuritis.. Phosphenes can be directly  
induced by mechanical, electrical, or  
magnetic stimulation of the retina or ..., 2
