Electronic control units â€œ for modulating single- and dual-fuel burners, Airâ€œfuel ratio (AFR) is the mass ratio of air to a solid, liquid, or gaseous fuel present in a combustion process. The combustion may take place in a controlled manner such as in an internal combustion engine or industrial furnace, or may result in an explosion (e.g., a dust explosion, gas or vapour explosion or in

a thermobaric weapon)., For the engine to run smoothly and efficiently it needs to be provided with the right quantity of fuel/air ...
