Embedded system hardware is frequently used in a loop, In today's world, embedded systems are everywhere -- homes, offices, cars, factories, hospitals, plans and consumer electronics. Their huge numbers and new complexity call for a new design approach, one that emphasizes high-level

tools and hardware/software tradeoffs, rather than low-level assembly-language programming and logic design., Printed Circuit Boards (PCBs) 20.11.2009 Hardware Design for Embedded Systems 3 "Substrate (e.g., epoxy and cotton paper, epoxy and woven glass) plated with conducting layers, An embedded system is a computer system designed for specific control functions within a larger system"often with real-time computing constraints.
