Circuit Range/Performance Problem, An
internal combustion engine (ICE) is a heat
engine where the combustion of a fuel
occurs with an oxidizer (usually air) in a
combustion chamber that is an integral part
of the working fluid flow circuit., You *could*

use either edge IF both event are fixed with
respect to the crank position (TDC). This is
true for optical sensors, and may be for Hall
sensors as well. With a VR sensor, both of
these event are definitely NOT fixed, only
one is (it corresponds to the 'zero-crossing'),
so you have to be sure to get it right., written
by Paul Geithner, January 2009 page 1 of 18
Installing a MegaJolt Lite Jr. All-Electronic
Ignition System in a Triumph Spitfire by Paul
Geithner What Is Spark Timing and Why Is It
Important?, Normal combustion. Under ideal
conditions the common internal combustion
engine burns the fuel/air mixture in the
cylinder in an orderly and controlled fashion.,
