de física, Definition. The center of mass is  
the unique point at the center of a distribution  
of mass in space that has the property that  
the weighted position vectors relative to this  
point sum to zero., In physics, a force is said  
to do work if, when acting, there is a  
displacement of the point of application in the  
direction of the force. For example, when a  
ball is held above the ground and then  
dropped, the work done on the ball as it falls  
is equal to the weight of the ball (a force)  
multiplied by the distance to the ground (a  
displacement)., Lista de Libros Gratis,
