Absorbers - Interference / Intermodulation,

The electric susceptibility χ_e of a dielectric material is a measure of how easily it polarizes in response to an electric field.

This, in turn, determines the electric permittivity of the material and thus influences many other phenomena in that medium, from the capacitance of capacitors

to the speed of light., The linear permittivity of a homogeneous material is usually given relative to that of free space, as a relative

permittivity $\hat{\mu}_r$ (also called dielectric constant, although this term is deprecated

and sometimes only refers to the static, zero-frequency relative permittivity)., Submissions received from Thu 14 Jun 18 to
