Forensic Facial Reconstruction - by Caroline  
Wilkinson, Forensic facial reconstruction is  
the reproduction of an individual's face from  
skeletal remains. Used when other forms of  
identification are very difficult or impossible, it  
can give a name to the dead in forensic  
cases, or in archaeological contexts, provide  
a tangible impression of real individuals from  
our past., We briefly describe the history of  
facial reconstruction in the deceased, starting  
from the skull. Facial reconstruction has  
passed through many phases and has been  
variously motivated, from religion and  
ancestor worship, through anthropology, to  
the identification of lost persons for forensic  
purposes., anatomy? Caroline Wilkinson
