diesel, also called petrodiesel, or fossil diesel  
is the most common type of diesel fuel. It is  
produced from the fractional distillation of  
crude oil between 200 °C (392 °F) and  
350 °C (662 °F) at atmospheric pressure,  
resulting in a mixture of carbon chains that  
typically contain between 8 and 21 carbon  
atoms per molecule., Glow fuel is a fuel  
source used in model engines “ generally  
the same or similar fuels can be used in  
model airplanes, helicopters, cars and  
boats.Glow fuel can be burned by very  
simple two-stroke engines or by more  
complicated four-stroke engines, and these  
engines can provide impressive amounts of  
power for their very small size., combustion

oil can be used as diesel fuel just as it is,  
without being converted to biodiesel. The  
downside is that straight vegetable oil (SVO)  
is much more viscous (thicker) than  
conventional diesel fuel or biodiesel, and it  
doesn't burn the same in the engine -- many  
studies have found that it can damage  
engines., Health Protection Agency
