William D. Callister, Jr. Department of

Metallurgical Engineering The University of

Utah, The microstructure of a polymer

(sometimes called configuration) relates to

the physical arrangement of monomer

residues along the backbone of the chain.

These are the elements of polymer structure

that require the breaking of a covalent bond

in order to change., ScienceDirect is the

A thermosetting polymer (also called a

thermosetting plastic or thermosetting resin)

is a polymer which becomes irreversibly

hardened upon being cured.Curing is caused

by the action of heat or suitable radiation and

may be promoted by high pressure or the

use of a catalyst., MARTINDALE'S
