GALAXIES IN THE UNIVERSE AN INTRODUCTION PDF - Search results, Tens of thousands of galaxies have been catalogued, but only a few have well-established names, such as the Andromeda Galaxy, the Magellanic Clouds, the Whirlpool Galaxy, and the Sombrero Galaxy., The study of galaxy formation and evolution is concerned with the processes that formed a heterogeneous universe from a homogeneous beginning, the formation of the first galaxies, the way galaxies change over time, and the processes that have generated the variety of structures observed in nearby galaxies., The Universe, Cosmos, Galaxies, Space, Black Holes, Earth, Planets, Moon, Stars, Sun Solar System, Intrinsic Redshifts in Quasars and Galaxies H. Arp Max-Planck-Institut für Astrophysik, Karl Schwarzschild-Str.1, Postfach 1317, D-85741 Garching,, The XDF is the deepest image of the sky taken with Hubble for searching for the earliest galaxies. It includes ALL images taken by Hubble on the small patch of sky first imaged as the

Hubble Ultra-Deep Field (HUDF) and subsequently as the HUDF09 and HUDF12., "Stuff your eyes with wonder, live as if you'd drop dead in ten seconds. See the world. It's more fantastic than any dream made or paid for in factories.", So, how can galaxies be traveling faster than the speed of light when nothing can travel faster than light? I'm a little world of contradictions. "Not even light itself can escape a black hole", and then, "black holes and they are the brightest objects in the universe". I've also said "nothing can ...", The most massive galaxies in our neighbourhood formed their stars billions of years ago, early in the history of the universe. At the present day, they produce very few new stars.
