Introduction There is almost nothing left to
discover in geometry. Descartes, March 26,
1619 Just as the starting point of linear
algebra is the study of the solutions of
systems of, In mathematics, a differentiable
manifold (also differential manifold) is a type
of manifold that is locally similar enough to a
linear space to allow one to do calculus. Any
manifold can be described by a collection of
charts, also known as an atlas. One may then
apply ideas from calculus while working
within the individual charts, since each chart
lies within a linear space to which the usual
..., Geometry (from the Ancient Greek:
ἡμετρον; geo-"earth", -metron
"measurement") is a branch of mathematics
concerned with questions of shape, size,
relative position of figures, and the properties
of space. A mathematician who works in the
field of geometry is called a geometer..
Geometry arose independently in a number

of early cultures as a practical way for
dealing with lengths ..., Topology/Geometry

your name and page number in the upper
right corner of each page., Riemannian
Geometry is an expanded edition of a highly
acclaimed and successful textbook (originally
published in Portuguese) for first-year
graduate students in mathematics and
physics. The author's treatment goes very
directly to the basic language of Riemannian
geometry and immediately presents some of
its most fundamental theorems., Site web
