Theorem is named after a Greek  
mathematician named Pythagoras (however,  
there are records of its use in northern Africa  
hundreds of years before Pythagoras lived).,

\_\_\_\_\_ Period: \_\_\_\_\_ Determine whether the  
triangles are similar. If they are write the  
similarity statement and state the postulate

process of calculating the area, we multiplied  
units times units. This will produce a final  
reading of square units (or units squared).  
Thus the area of the figure is 112 square  
units. This fits well with the definition of area  
which is the number of square units that will  
cover a closed figure., CH. 9 Guided Notes,
