A piezometer is either a device used to
measure liquid pressure in a system by
measuring the height to which a column of
the liquid rises against gravity, or a device
which measures the pressure (more
precisely, the piezometric head) of
groundwater at a specific point. A piezometer
is designed to measure static pressures, and
thus differs from a pitot tube by not being
pointed into the fluid flow., Technical

It can also be used to locate discontinuities in a connector, printed circuit board, or any other electrical path. The equivalent device for optical fiber is an optical time-domain reflectometer, Bowden Urban Village is a \$1 billion redevelopment on a former site of the Clipsal Corporation in the suburb of Bowden, adjacent to Adelaide Park Lands and Outer Harbor railway line., ADAM Technology creates digital photogrammetric software and manufactures analytical stereoplotters, mapping software and 3DM remote measurement technology, About NUI Galway.
