In this chapter we study the first major class of evolution inclusions. They are problems defined in the framework of an evolution triple, which involve coercive nonlinear operators of monotone type., Handbook of

Multivalued Analysis Volume II: Applications by Shouchuan Hu Mathematics Department, Southwest Missouri State University,

Greece SPRINGER-SCIENCE+BUSINESS MEDIA, B.V., After this book, every professor, every student, and every one

somehow interested in set-valued analysis will find in it a deep source of learning. [Rodrigo Penaloza, Los Angeles, USA]

[Rodrigo Penaloza, Los Angeles, USA], The tools that we use in the study of problem (1) come from multivalued analysis and from the

theory of operations of monotone type. A detailed presentation of these theories can

be found in the books of Hu & Papageorgiou

Analysis Volume II: Applications Series: Mathematics and Its Applications, Vol. 500 In

volume I we developed the tools of "Multivalued Analysis. " In this volume we

examine the applications. After all, the initial impetus for the development of the theory of

set-valued functions came from its applications in areas such as control theory

and mathematical economics. In ..., Although the presentation of the subject requires some
